

Did you know that SUNY Morrisville is working to become one of the top Sustainably Ranked Colleges in New York and the Northeast?

How can you help?

RECYCLE your Bottles, Cans, Glass, Plastics and Paper:

SUNY Morrisville went from 9% to 14% recycling just by adding more tri-canister recycling bins around campus. How can you help?

Please separate your waste from recyclables: there are three bins, 1 for paper and cardboard (only), 1 for CLEAN bottles, cans, glass, and recyclable plastics (only), and one for Landfill Waste. Please help us keep from degrading the recycling streams with waste or other items that don't belong.

Single-use plastics are being phased out on SUNY Campuses beginning in August of 2024:

- 7 categories
 - Bags
 - Balloons
 - Beverage Bottles
 - Food Service Products
 - Straws, Stirrers, Spill plugs/Sticks
 - Utensils
 - Wraps and Packaging Films

Individual water bottles at events (**Bring your hydration**); we have hydration stations, or you can fill your own bottles and jugs at one of our bottle-filling stations.

- Executive Order #22, signed in September of 2022, states that Affected Entities shall not expend State funds to purchase bottled water. If an Affected Entity determines that it needs to purchase bottled water for health or safety reasons, it may request an exemption from the Council. Affected Entities purchasing bottled water for emergency purposes do not require an exemption.

"Turn 'em Off": Save electricity and budget costs. Please turn off any light switches in rooms or areas where the lights are no longer in use or needed, especially if you're the last one leaving for the day or the WEEKEND!

If you have control of a thermostat, generally, it should be set to 68 degrees Fahrenheit in the heating months and 76 degrees Fahrenheit in the cooling months.

Sometimes, these get 'over-adjusted' and forgotten; just please make sure thermostats are set back to these temperatures over weekends and/or longer breaks.
